Practice questions:

- 1. You need to start a new container using the nginx image while setting an environment variable ENV_MODE=production. Write the docker run command to achieve this.

- 2. You have a running container named my_app, but it's not behaving as expected. You want to check its logs to debug any errors. Write the command to view its logs and follow new log entries in real-time.
- 3. A container named web_server was stopped. Write the command to:a) Start the container again.b) Stop the container when needed.

1)

```
C:\Users\shree>docker run -e ENV_MODE=production --name container2 nginx
/docker-entrypoint.sh: /docker-entrypoint.d/ is not empty, will attempt to perform configuration
/docker-entrypoint.sh: Looking for shell scripts in /docker-entrypoint.d/
